PROFESSIONAL SUMMARY

Data Analyst with hands-on experience in SQL, Python (Pandas), Power BI, and Advanced Excel. Currently building automated reporting systems and KPI dashboards at Ooredoo Qatar. Independently developed a browser-based data cleaning and analytics application (Sahil's AI Data Studio v5.0) capable of processing datasets with 500,000+ rows using chunk-based memory-stable processing. Strong foundation in statistical analysis, outlier detection, and automated data-quality workflows.

KEY IMPACT

60%
REPORTING TIME REDUCED

100%
DATA RECONCILIATION ACCURACY

500K+
ROWS PROCESSED PER DATASET

90%
FASTER ANALYSIS DELIVERY

PROFESSIONAL EXPERIENCE

Data Analyst 2023 — Present
Ooredoo Qatar | Doha, Qatar

- Built and automated a daily reporting pipeline using Python (Pandas) and Advanced Excel, reducing manual reporting time by 60% (3+ hours saved daily) and enabling real-time KPI tracking for a 15+ member team.
- Developed interactive Power BI dashboards visualizing performance trends, product metrics, and customer segmentation with drill-down capability by region, product, and time period.
- Leveraged AI-assisted code generation (ChatGPT, Claude, DeepSeek) to build Python automation scripts and optimize SQL queries — cutting analysis delivery time by 90%.
- Processed high-volume transactional data via POS systems with 100% accuracy, maintaining zero-discrepancy records.
- Analyzed CRM billing data to resolve complex queries, reducing escalations by 25%.

Procurement & Data Analyst (Contract) May 2023 — Dec 2023
AI Fuzail Engineering Services | Doha, Qatar

- Maintained supplier, purchase order, and invoice records — cross-checking data across systems to ensure 100% inventory accuracy.
- Reconciled expenses and produced monthly finance summary reports using Excel pivot tables and charts.
- Identified data inconsistencies between procurement and accounting systems, preventing duplicate payments and saving QAR 8,000+ annually.

FEATURED PROJECTS

Sahil's AI Data Studio v5.0 — Data Cleaning & Analytics Platform
JavaScript, Python (Pandas, NumPy), Web Workers | 2026

- Built a browser-based data cleaning and analytics app handling CSV, TSV, XLSX, and JSON files with chunk-based processing (10,000 rows/chunk via web workers), supporting 500,000+ row datasets without memory overflow.
- Implemented missing-value detection, duplicate identification, and outlier flagging via 3-Sigma and 1.5×IQR methods with automated imputation.
- Built analytics panel generating descriptive statistics and distribution histograms with multi-format export (CSV, XLSX, JSON).

Sales Report Dashboard — Power BI & Excel Integration
Power BI Desktop, DAX, Excel VBA | 2026

- Designed an interactive dashboard tracking daily KPIs, product performance, and customer segmentation for a telecom retail environment.
- Built DAX measures for revenue calculations, month-over-month growth, and target-vs-actual variance analysis.
